

Airline Dataset

Importing Required Modules

1. importing numpy for mathematical operation on arrays and dataframe.
2. importing pandas for reading data and data manipulation.
3. importing matplotlib and seaborn to show the insights and visualization from the dataset.
4. importing warnings for Warning messages that are typically issued in dataframe where it is useful to alert the user of some condition in a program, where that condition (normally) doesn't warrant raising an exception and terminating the program.

```
In [1]: import numpy as np
import pandas as pd
import matplotlib.pyplot as plt
import seaborn as sns
# import warnings
# warnings.filterwarnings("ignore")
```

```
In [2]: #https://public-pantheon.tableau.com/en-us/s/download
```

```
In [3]: # sns.set(style = 'darkgrid')
```

Reading Dataset and Checking the NaN Values , Data Types , and Statistical Analysis

1. Since data is in form of excel file we have to use pandas read_excel to load the data
2. After loading it is important to check the complete information of data as it can indicate many of the hidden information such as null values in a column or a row
3. Check whether any null values are there or not. if it is present then following can be done,
 - A. Filling NaN values with mean, median and mode using fillna() method
4. Describe data --> which can give statistical analysis

```
In [2]: df=pd.read_excel("Data_Train.xlsx")
```

```
In [41]: df.head()
```

```
Out[41]:
```

	Airline	Source	Destination	Route	Dep_Time	Arrival_Time	Duration	Tota

From `df.info()` we can see that `Date_of_Journey` is a object data type

1. Therefore, we have to convert this datatype into timestamp so that we can use that column properly to find the insights.

2. For this we require pandas **`to_datetime`** to convert object data type to datetime dtype.

```
In [12]: df['Date_of_Journey']=pd.to_datetime(df['Date_of_Journey'])
```

```
C:\Users\cipl\AppData\Local\Temp\ipykernel_9652\2063426282.py:1: UserWarning: Parsing dates in %d/%m/%Y format when dayfirst=False (the default) was specified. Pass `dayfirst=True` or specify a format to silence this warning.
df['Date_of_Journey']=pd.to_datetime(df['Date_of_Journey'])
```

```
